CloverLink SYSTEMS, INC.

Company Overview

CloverLink Systems, Inc. offers a full spectrum of Internet application development services. We specialize in analysis, design and development of Internet and Intranet based solutions, using leading-edge technologies backed by a sound business strategy. We are dedicated to bringing your products and services to market on time and under budget.

Company Philosophy

CloverLink Systems, Inc. utilizes a "team approach" to software development. To that end, we bring together the best of breed in technology and staff in order to ensure the success of our customer's projects. Our success is based on meeting or exceeding our customer's expectations in every engagement.

Methodology

A disciplined approach is critical to successfully create business solutions on time, in scope, and within budget. Technology project success depends as much on business objective alignment, project management, and development processes as on writing quality code. To that end, CloverLink Systems, Inc. utilizes the Microsoft Solutions Framework (MSF) to provide specific how-to guidance for application and infrastructure projects, emphasizing the people and process elements of the project in addition to the technology choices.

Certified Microsoft Partner

CloverLink Systems, Inc. is a Microsoft Certified Partner and can bring a team of Microsoft Certified Professionals to your projects. Our team of certified professionals are experts in Internet application development using the entire Microsoft suite of products, including Microsoft Message Queue Server (MSMQ), Microsoft SQL Server, COM+, XML/XSLT, SOAP and Web Services and Microsoft Internet Information Server (IIS).

Management & Staff

CloverLink Systems, Inc. is managed and staffed by a team of professional analysts, system architects, graphic designers and application developers. Our team members are highly experienced in the development of total Internet and Intranet solutions for business and industry.

We specialize in the design and development of Internet-based e-Commerce systems.

Products and Services

We offer Analysis, Design, Development and Training services to our clients.

- **Analysis** — We work with you to fully understand the business problem at hand.
- **Design** — We assist you in designing a viable, long-term solution to the problem.
- **Development** — Using a proven "Component Model" approach to software development, we solve the business problem in a timely, cost-efficient manner.
- **Training** — As we develop your application, we will train your IT staff in the leading-edge technologies we use so that you can enhance and support the solution we build for you.
- **Graphic Design** — Whether it's creating a corporate identity, print material or website graphics, our professional staff will work with you to enhance your company's image.

Internet e-Commerce and Client Server Development

Using an "n-tier" model for application development, CloverLink Systems, Inc. can manage and develop your distributed application from start to finish. Our team of Microsoft Certified Professional programmers, engineers, analysts, designers and developers work with leading edge, proven technologies in order to ensure the success of your project. Our expertise in Microsoft Server products — including Microsoft Message Queue Server, Internet Information Server, SQL Server and COM+ — has been proven in several medium- and large-scale Internet projects.

Training and Technology Transfer

Our staff of Microsoft Certified Professionals is highly experienced in delivering classroom or on-the-job training to your staff. We employ the latest teaching techniques in order to ensure the effectiveness of your training efforts, while using real life examples in the process. Solve your technology challenges and get your staff trained at the same time.

CloverLink SYSTEMS, INC.

Graphic Design

Our team of professional graphic designers has the expertise to deliver the optimum solutions for all of your graphics and visual projects. Our artists are well versed in the design and creation of custom logos, print materials and presentations as well as web-based site design, animation and advertising. We will work directly with your marketing and business people to develop customized artwork to fit your current and future needs.

Placement Services

Our Placement Services division can find just the right resource for your management and staff openings. Unlike other placement firms, we have the technical expertise to evaluate a candidate before you make any investment. Our team of interviewers conducts in-depth technical interviews with each candidate, and where appropriate, we thoroughly review source code samples. Most importantly, our placement services come with a customer satisfaction guarantee.

Application Hosting

With Internet Servers located in a secured hosting facility, CloverLink Systems, Inc. can host your Internet applications on a dedicated 45 Mb Internet connection. Speed, security, reliability and a guaranteed service commitment help to ensure that your Internet application will experience a minimum of downtime.

We are dedicated to bringing your products and services to market on time and under budget.

Our Accomplishments

We have worked with some of the largest and smartest companies on the horizon to enhance their systems and increase their business. Much of our focus has been in the Mortgage Banking, Real Estate and Hi-Tech industries. We specialize in applications that require deep integration into internal systems and real e-commerce. Some of our notable contributions include:

- Design and Development of the largest B2B site on the Internet today which enables myriad mortgage brokers to seamlessly transact business with one of our customers in the mortgage banking industry.
- Development of a corporate Intranet/Extranet for the largest Realtor® association in the U.S.
- Creation of a worldwide value added network for the transaction of real estate settlement services including the electronic ordering and receipt of credit reports, property appraisals, title and flood insurance and tax services
- Design and development of the most sophisticated suite of mortgage calculators available in the marketplace today
- Integration into several third-party desktop systems including:
  - Genesis 2000
  - Point by Calyx Software
  - Empower by Eastern Software
  - Loan Processor by Pipeline Solutions
  - The Loan Handler by Contour Software
  - The Qualifier Series by Byte Enterprises
  - Loan Officer Plus by Home Advisor Technologies
  - Other FNMA based Loan Origination Systems
- Development of unique tools, components and web services including:
  - A Microsoft Management Console (MMC) snap-in for the administration of Microsoft Message Queue Server Enterprises
  - A context-sensitive content generation engine that aids in the rapid deployment of web sites using industry standard XML and XSLT
  - A multi-threaded WhoIs web service
  - A document generation engine that combines database data with Adobe PDF forms to produce secure, electronic documents of any type

We encourage you to visit our website to view live demonstrations of some of our custom technologies and also to download the source code for these state-of-the-art applications.
